Exercise 1 *The London Eye is a Ferris wheel 135 meters in diameter. It is boarded at its lowest point (6 o'clock) from a platform which is 6 meters above ground. The wheel makes one full rotation every 30 minutes, and at time $t = 0$ you board at the loading platform (6 o'clock). Let $h = f(t)$ denote your height above ground in meters after t minutes.*

(a) *The period of the function $h = f(t)$ is* $\boxed{30}$ *minutes.*

(b) *The midline of the function $h = f(t)$ is* $\boxed{73.5}$ *meters.*

(c) *The amplitude of the function $h = f(t)$ is* $\boxed{67.5}$ *meters.*

(d) *Which of the following graphs is the graph of $h = f(t)$?*

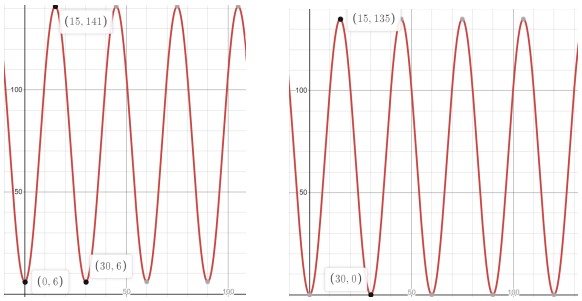

Figure 1: A on the left and B on the right

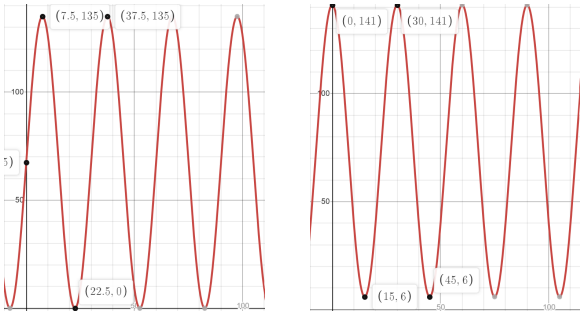

Figure 2: C on the left and D on the right

Multiple Choice:

(i) *A* ✓

(ii) *B*
