

**Exercise 1** When studying trigonometry, you will learn that  $\sin$  is an odd function and  $\cos$  is an even function. This means that for all inputs  $x$ ,  $\sin(-x) = -\sin(x)$  and  $\cos(-x) = \cos(x)$ . Additionally,  $\sin$  is not even, and  $\cos$  is not odd.

- (a) Consider the function  $f$  defined by  $f(x) = 7.2 \sin(x)$ .  $f$  is

**Multiple Choice:**

- (i) even.
- (ii) odd. ✓
- (iii) neither even nor odd.

- (b) Consider the function  $g$  defined by  $g(x) = \cos(x) + 308$ .  $g$  is

**Multiple Choice:**

- (i) even. ✓
- (ii) odd.
- (iii) neither even nor odd.

- (c) Consider the function  $h$  defined by  $h(x) = \sin(x) + \cos(x)$ . For reference, here is a graph of  $h$  on Desmos:

Desmos link: <https://www.desmos.com/calculator/t0r1zihobf>

$h$  is

**Multiple Choice:**

- (i) even.
- (ii) odd.
- (iii) neither even nor odd. ✓
