Exercise 1 In each part, an invertible function f will be defined. For each function, find its inverse.

(a)
$$f(x) = 2x - 6$$

$$f^{-1}(x) = \boxed{\frac{6+x}{2}}$$

(b)
$$f(x) = 29 - x$$

$$f^{-1}(x) = 29 - x$$

(c)
$$f(x) = \frac{x-3}{2} + 3$$

$$f^{-1}(x) = \boxed{2x - 3}$$

(d)
$$f(x) = \sqrt{5x - 1} + 3$$

$$f^{-1}(x) = \boxed{\frac{(x-3)^2 + 1}{5}}$$
