Exercise   1   *A landscaping company charges $45 per cubic yard of mulch plus a delivery charge of $20.*

(a) *A linear function which computes the total cost C (in dollars) to deliver x cubic yards of mulch is given by $y = \boxed{45x + 20}$.*

(b) *According to the linear function above, 20 cubic yards of mulch costs $\$\boxed{920}$.*

(c) *According to the linear function above, $560 will buy you $\boxed{12}$ cubic yards of mulch.*
